Reclamation District No. 108 Safety Award Nomination 2016

The District is always looking for ways to help staff prevent back injuries. We had guys that were having to use a portable sump pump that is very heavy. Staff had to pick up the pump and move it to the vehicle then lift it up higher to load causing back strain. Our employee, Alan Murray was given the task to make the pump more mobile. An inexpensive dolly was purchased and the pump was attached to it so it could be wheeled out as needed. Hooks were added to hang the hoses and prevent employee tripping on the hosing when moving the pump. Portable ramps are used to wheel the pump up onto the pickup. The employee no longer has to lift the pump to move it or to load it. This design has helped to protect employees against back injuries.

We would like to submit Mr. Alan for a safety award and recognize his efforts on behalf of our employees.
