Several safety features have been incorporated into the design of the “leak repair” utility truck:

An LED illuminated rear step was installed for easy access into the bed area

A power lift gate was installed for easy loading of heavy equipment

The bed interior, rear step and lift gate platform are coated with spray on liner to prevent slipping

A compartment was fabricated for easy and secure storage of a soil compactor

A back up camera system was installed to help prevent backing accidents

An on board under deck air compressor was installed. A tow behind compressor trailer is no longer needed

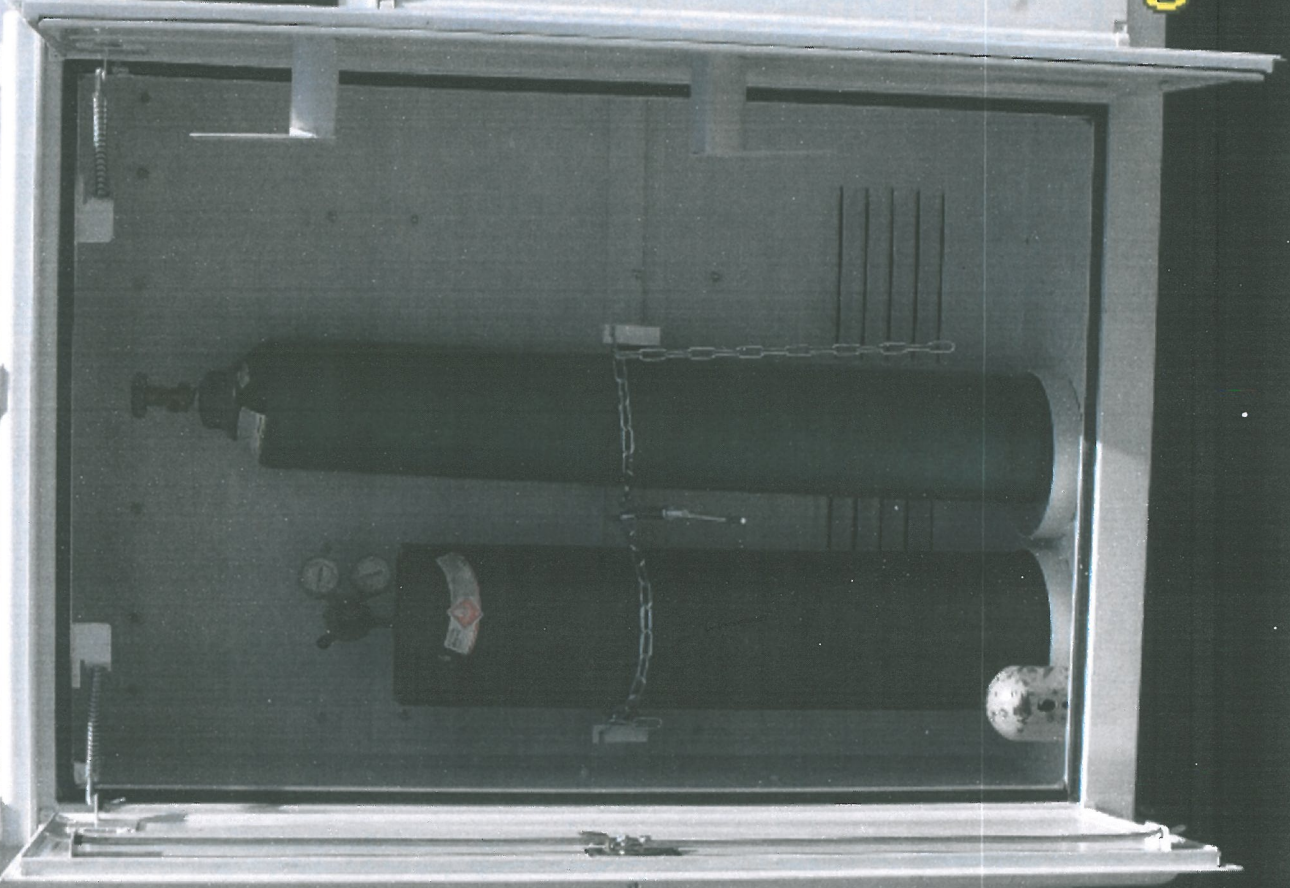

Easy access tilt out racks were installed for 60 and 90 pound Jack hammer storage

Oxy/ acetylene cutting torches are secured in a ventilated cabinet

Frequently used tools are stored in rollout drawers on the curbside of the truck to keep workers away from street traffic

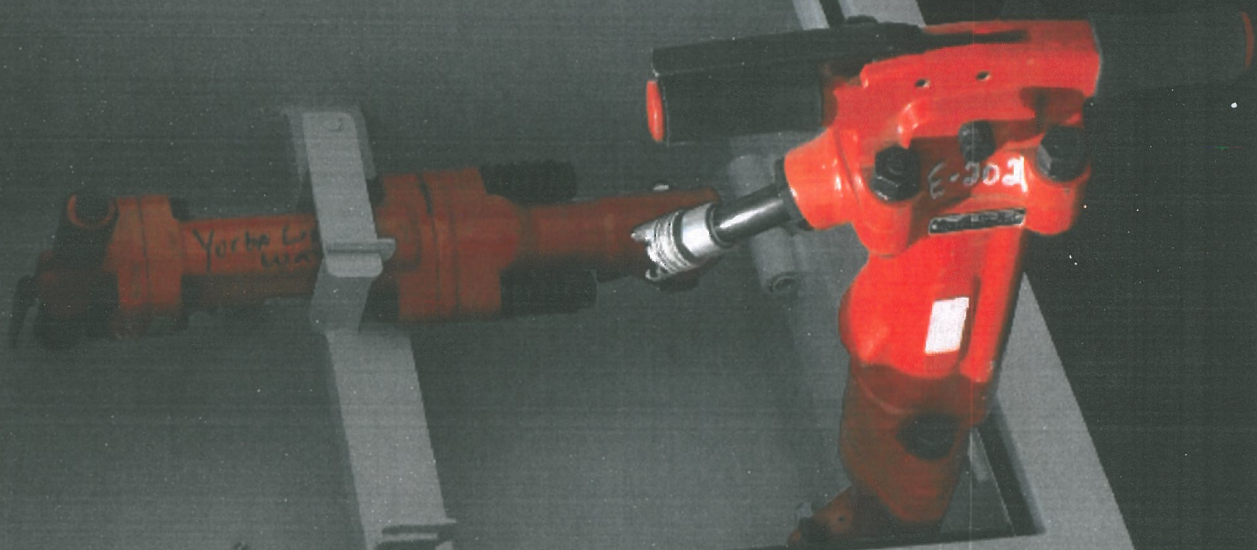

Also installed are cone racks, work lights, Directional arrow board and strobe beacon
