

# Build and Customize Training To Suit Your Organization

*Our Activities Builder Lets You Focus on Your Top Priorities*

The training you provide to your personnel needs to suit the unique aspects of your organization. One-size-fits-all approaches fail to account for geography, population, infrastructure, local hazards, and a whole host of other factors that make water and wastewater management in your area distinct from other areas.

To meet this need for customization, Vector LMS training management system includes the Activities Builder, which allows agencies to:

- 1 Easily track hands-on and in-person trainings
- 2 Upload a variety of custom content including PowerPoints, videos, and more
- 3 Create custom certificates of completion
- 4 Create custom assignments for policies, procedures, training material, and more
- 5 Build tests to add to an activity to ensure comprehension of lessons

## Best-In-Class Solution for Training & Personnel Compliance

Public works organizations around the country rely on Vector Solutions to assign, deliver, track, and report all types of training and compliance tasks. In addition to allowing agencies to upload custom content, Vector LMS training management system also offers functionality to customize and automate reports so leaders get timely information to make data-driven decisions.
